

Enterprise Private Cloud

Airtight Security, Complete Control

Your business demands more flexibility, increased reliability and reduced costs. Your infrastructure is already virtualized, but your hardware needs to be refreshed. You need a cloud solution that is flexible and efficient, not cumbersome. In-house solutions can be costly and time-consuming, but what level of control do you need for your environment? How do you take advantage of cloud technologies without taking a full plunge into the public cloud?

The Internap Solution

Designed from the ground up, Internap offers dedicated and virtual enterprise private cloud options to meet your IT Infrastructure needs. A dedicated private cloud solution is ideal for organizations that seek the benefits of virtualization without the concern of shared infrastructure, while a virtual private cloud is ideal for companies that desire simplified management and increased flexibility. Both of our private cloud solutions are built on VMware®, the leader in enterprise IT virtualization. Backed by Internap's world-class customer service, you gain access to a proven, secure platform, allowing you to move seamlessly into the cloud.

Dedicated Private Cloud

Internap's dedicated private cloud is deployed in a secure, isolated environment, allowing you to enjoy the management and flexibility benefits of virtualization without having to share your infrastructure. We tune your dedicated private cloud for maximum performance and efficiency based on your needs, providing the utmost control over your environment with your choice of hardware configurations. Our custom solution also provides tailored data protection, as it is designed for your specific security requirements.

Virtual Private Cloud

For enterprises that need a private cloud but don't want to worry about the underlying hardware, Internap's virtual private cloud provides a compelling alternative. By focusing on resources and not hardware, the virtual private cloud increases the ease of management and even gives customers the tools to provide IT-as-a-Service to multiple departments within their business. Customers also receive reserved resources and can create customized network configurations on-demand through VMware's vCloud™ portal.

The Internap Difference

Our private cloud solutions supply complete IT platform flexibility with a hybrid of IT deployment options. Leveraging our patented Managed Internet Route Optimizer™ (MIRO) technology, your traffic is directed over redundant, high-speed connections, dynamically linking you to the best performing Internet route at all times. Our Performance IP™ service and redundant data center architecture protects your business information, creating an enhanced experience for your end users.

We provide a secure private cloud solution built on a foundation of superior performance, flexibility and cost savings. The result: an exceptional end-user experience with fewer abandoned sessions, increased revenue opportunities and unmatched reliability.

Enterprise Private Cloud Benefits

- Utilize VMware to gain more flexibility, increase efficiency and leverage advanced virtualization features
- Guarantee dedicated resources for your activities
- Improve performance from the cloud to your end user by leveraging our patented route optimization technology
- Provide greater security and control within a private platform environment
- Allow for predictable monthly IT spend based on planned capacity levels

Contact us to learn how Internap can solve your IT challenges by enabling you to focus on your core business, improve service levels and lower the cost of IT operations.

Enterprise Private Cloud Features

Trusted Hypervisor Platform

VMware, the industry's most trusted hypervisor, offers an excellent balance of security, flexibility and administrative maturity. Create your own virtualized environment and leverage the benefits of cloud while still meeting your unique business demands.

Premium Data Center Foundation

Our data centers are engineered to strict reliability standards so you are assured your cloud will have maximum uptime. Our secure SAS 70 Type II audited facilities, conveniently located in major metropolitan areas, feature N+1 redundancy for both power and cooling.

Patented Performance Network

Our cloud services connect to multiple major backbone providers through our patented route optimization technology. With the highest performing and most reliable network built in, your cloud is maximized for optimal uptime.

Why Internap?

Transform your IT Infrastructure into a competitive advantage with IT IQ from Internap, intelligent IT Infrastructure solutions that deliver unparalleled performance, availability and support. Since 1996, thousands of enterprises have entrusted Internap to deliver their online applications across our platform of connectivity, colocation, managed hosting and cloud services.
